PROFILE

Backend-focused software engineer with a track record of shipping production features in fintech and trading platforms. Specialized in NestJS, PostgreSQL/Oracle, and integrating complex legacy banking systems. 1337 Coding School graduate with strong systems fundamentals from C/C++ and a background in mathematics that brings rigor to backend architecture and problem-solving.

PROFESSIONAL EXPERIENCE

Backend Software Engineer

FinaMaze

FinaMaze – AI-driven Investment Platform

Feb 2025 – Present

Casablanca, Morocco

- Joined as the first backend contributor on a B2B fintech platform serving a major Middle Eastern bank, where AI-driven asset managers build, rebalance, and oversee investment portfolios for the bank's clients.
- Owned end-to-end design and delivery of the onboarding and KYC module, integrating with the bank's legacy SOAP APIs – reverse-engineering undocumented endpoints without a sandbox environment to ship a working flow into UAT.
- Designed Oracle database schemas from scratch for authentication, user onboarding, notifications, and messaging modules; optimized critical queries through targeted indexing strategies.
- Built the notifications and messaging subsystems, including background jobs and queue-based dispatch for asynchronous delivery at scale.
- Implemented JWT/Passport authentication, login and registration flows, and instrumented services with Prometheus for production monitoring.
- Took 6 features through UAT and pre-production while collaborating across a 24-person engineering organization (backend, frontend, DevOps, QA).

Backend Developer

aikon

AIKON Mobile App – Connecting Traders

Oct 2024 – Feb 2025

Remote

- Contributed backend features to an iOS social-trading platform that combines messaging and trading workflows in a single mobile experience.
- Designed and built the WhatsApp Business API integration and the surrounding business logic, enabling traders to engage with the platform through a familiar messaging channel.
- Implemented real-time chat assistance using Socket.io, allowing traders to communicate with support agents and other users without leaving the app.
- Modeled the PostgreSQL tables required for the messaging and integration features, and shipped them as part of the production backend.
- Implemented authentication flows with JWT and social login providers; collaborated remotely with a team of 3 backend, 2 frontend, and 1 DevOps engineer.

SKILLS

Backend

NestJSNode.jsPython

ExpressFastAPIPostgreSQL

DockerLinux

LANGUAGES

- Arabic – Native
- French – Professional
- English – Professional

HOBBIES

- Competitive Chess (Blitz ELO 2300)
- Geometry & Mathematics Olympiads

Spring Boot

PostgreSQL

Socket.io

JWT

WhatsApp Business API

Full Stack Engineer

 **Upwork — Freelance**

 Feb 2024 – Oct 2024

 Remote

- Delivered full-stack web projects end-to-end for international clients — from requirements gathering and architecture through development, deployment, and handover.
- Built backend services with Node.js and Express alongside modern React frontends, handling authentication, data persistence, and third-party integrations.
- First commercial software engineering role; transitioned full-time into tech in February 2024 after 1337 Coding School.

Mathematics Teacher

Ministry of National Education (Morocco)

 Sep 2021 – May 2024

 Beni Mellal, Morocco

- Taught mathematics to high-school students for three years while transitioning into software engineering through 1337 Coding School — developed strong skills in breaking down complex concepts, which now translate directly into clear technical communication and documentation.
- Designed lesson plans, assessments, and progress tracking, demonstrating autonomy and rigor that carry over to backend system design.

Chess Instructor

AI Akhawayn School

 2018 – 2019

 Beni Mellal, Morocco

- Coached chess to children aged 6–10 at one of Beni Mellal's largest schools, designing age-appropriate exercises to develop strategic thinking and concentration.

EDUCATION

Teaching Certificate — Secondary Mathematics

CRMEF Béni Mellal-Khénifra

 2020 – 2021

 Béni Mellal, Morocco

- *Certificat de Qualification Pédagogique d'Enseignement Secondaire* — one-year state program (40% pedagogical theory, 60% supervised classroom practice) qualifying graduates for the national secondary teaching corps.

Computer Science — Common Core

1337 Coding School

 Dec 2018 – Jun 2022

 Khouribga, Morocco

- Intensive peer-led, project-based program (Moroccan branch of 42 Network); specialized in low-level systems and graphics with C/C++ — notable project: a multi-threaded ray tracer with realistic lighting.

Bachelor of Science and Technology

FST Beni Mellal

 2015 – 2019

 Beni Mellal, Morocco

- Electronic Engineering and Telecommunications. Coursework in electronics, signal processing, telecommunications, and industrial computing.
